DETAILED ACTION

Request for Continued Examination

1. The Request for Continued Examination filed on 3/3/03 (RCE) under 37 CFR 1.114 based on parent Application No. 09/584,182 is acceptable and a RCE has been established. An action on the RCE follows.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 3-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Holt (GB 2,140,765) in view of Buchman et al.. (US 5,020,302)..

Holt discloses a machine for rolling up flexible articles and describes a method for its use. Article 10 is inserted into receptacle 22 via a hollow tube section 20 having first and second openings; see figure 1. The first opening is a cone with a flared section connected to the second narrower opening. The receptacle 22 is positioned over the second narrow opening of the tube 20 and the rolled article 10 is inserted through first flared opening, through second narrow opening, and into receptacle 22 in a predetermined orientation and then rotated in an opposite direction of winding the article 10; see column 2, lines 104-111. The tube section is mounted on packaging station 21, a stationary structure.

It is not clear whether or not the rolled item in Holt is rotated in any direction during the insertion process into either the flared section or the tubular section. However, Buchman et al. directly teaches rotating a rolled item in a roll inserter while rotating the rolled item in a direction opposite the direction of the roll from the center spiraling outward during an inserting operation; see figure 1, column 3, lines 57-60. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the rotating of a rolled product as taught by Buchman et al. in the invention of Holt in order to assist in the insertion process.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher R Harmon whose telephone number is 703-308-8643. The examiner can normally be reached on Monday-Thursday from 8-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on 703-308-2187.
